At CitySensLab, we believe that spaces can care for. That nature must take a central place in the environments we inhabit, providing calm, beauty, and well-being.

We design configurable biophilic furniture systems to create spaces that integrate nature and strengthen our connection with it.

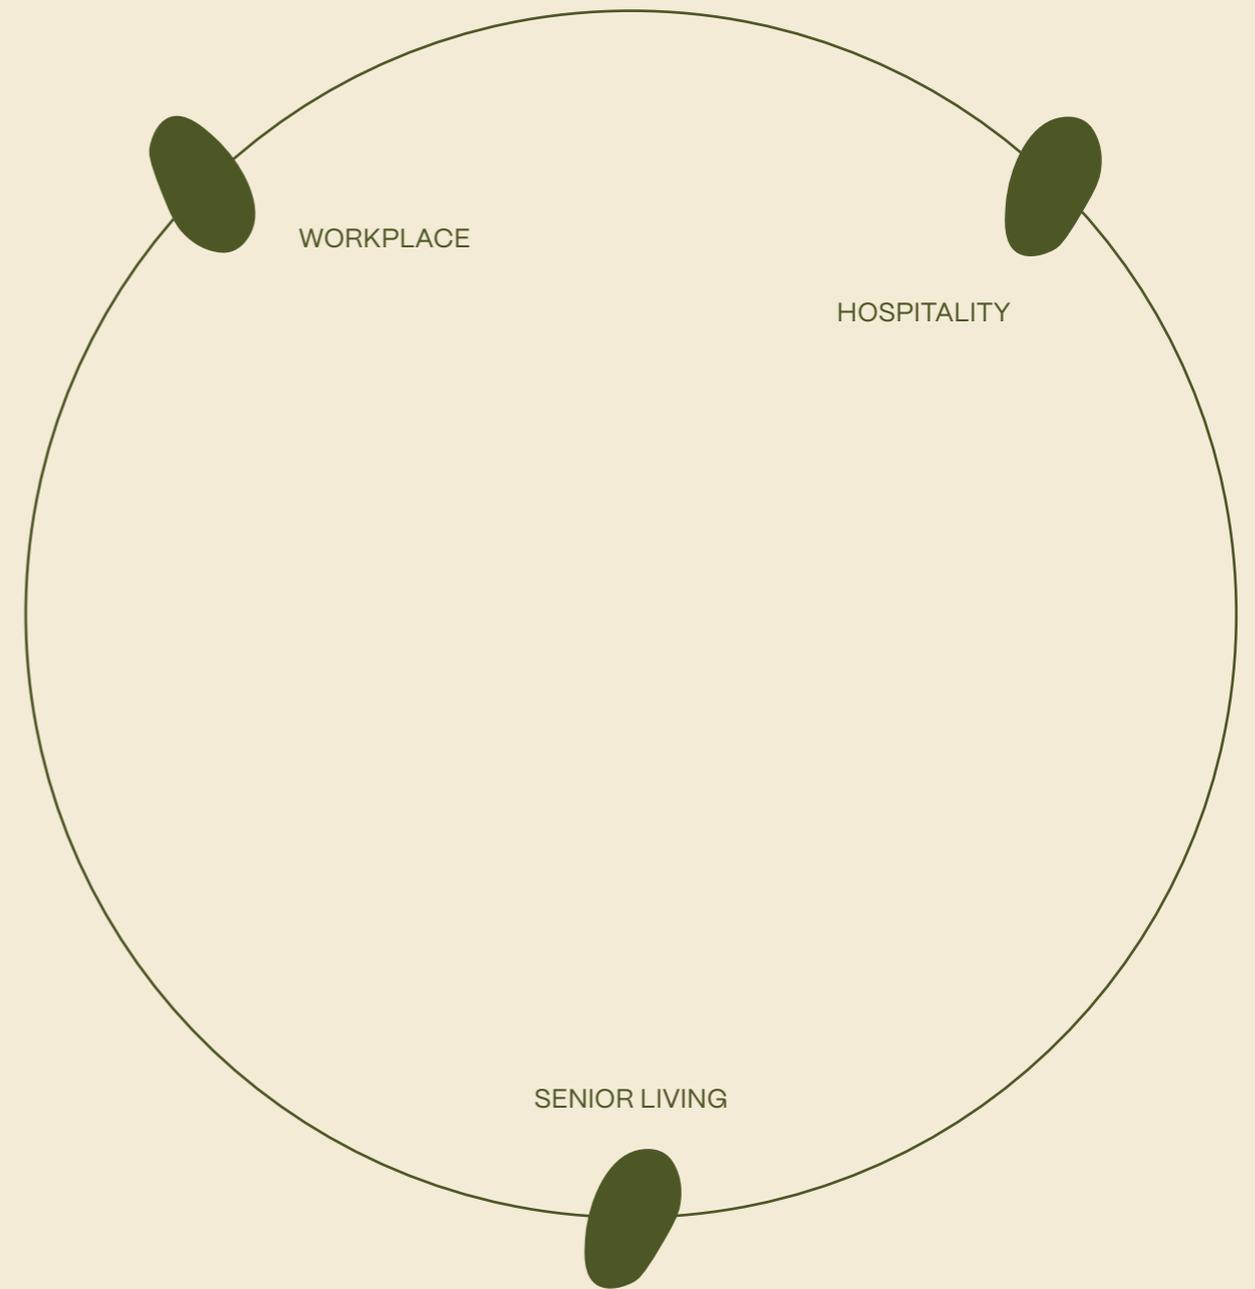

We cultivate spaces that make us feel better, offering solutions to everyday challenges while addressing the major issues of today's world. That's why we work with high standards and awareness, with committed people and honest materials.

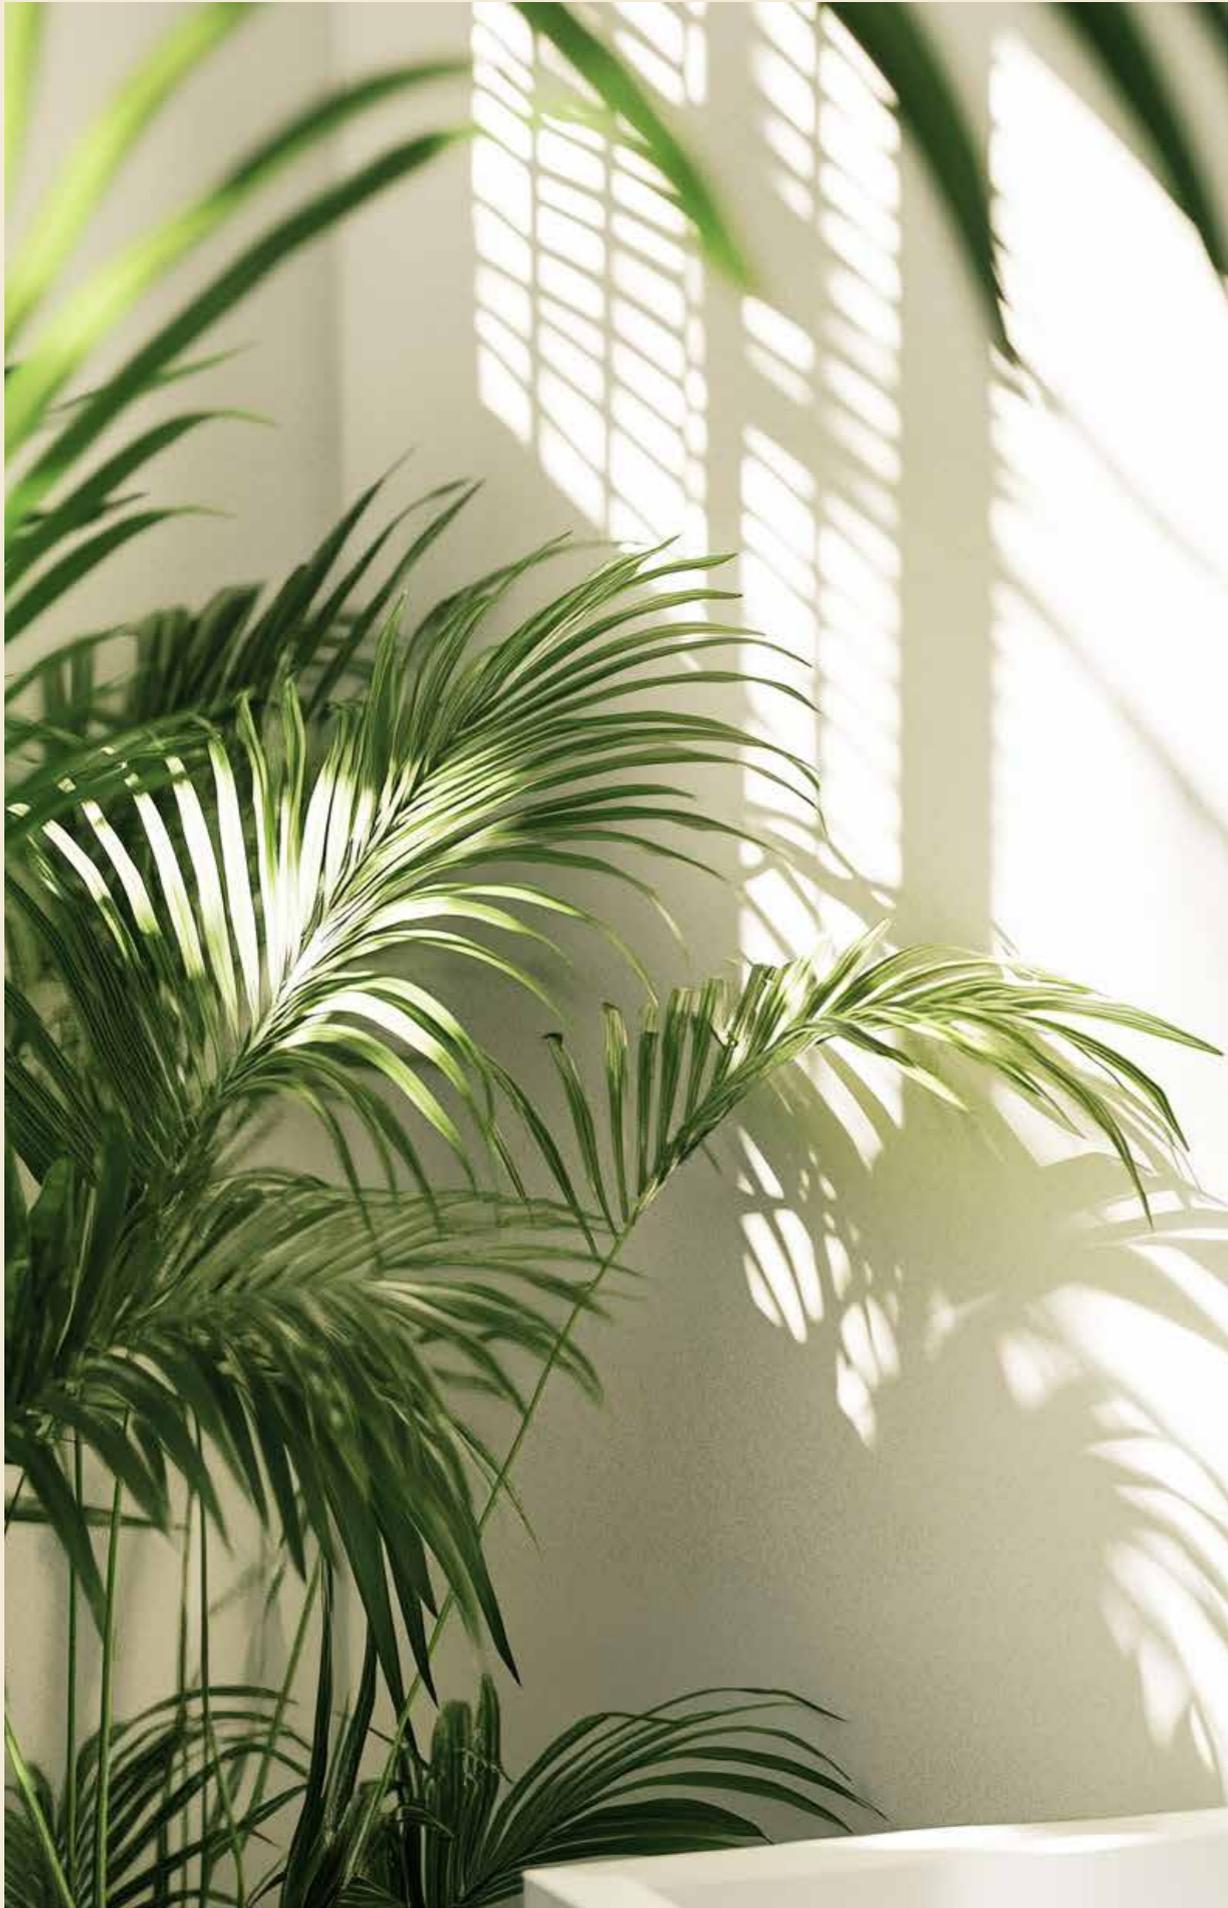

INSPIRED BY NATURE,
CREATED FOR PEOPLE

values

AWARENESS

We live on a planet with finite resources, where the rate of exploitation exceeds the capacity for regeneration. In response to this reality, we bet for circular economy, ecodesigning the entire life cycle of our biophilic systems

We aim to be an active part of the new sustainability paradigms in the Contract–Hospitality sector. We choose to use post-consumption and post-industrial waste as a high-quality raw material

AWARENESS

We live in a society with major inequalities, where not everyone has access to a dignified life. This reality drives us to commit to social economy: in the manufacture and handling of all our products, we promote the social inclusion of people at risk of exclusion.

WE COLLABORATE WITH:

FUNDACIÓ ESTELA – TARRAGONA

FUNDACIÓ PERE MATA – REUS

FUNDACIÓ VIVER DE BELL-LLOC – CARDEDEU

FUNDACIÓ PORTOLÀ – SANT FELIU DE LLOBREGAT

ADAPTABILITY

From our commitment to placing people and the planet at the center, our configurable biophilic furniture systems naturally emerge. We propose flexible, adaptable solutions, capable of transforming themselves and the spaces they inhabit, and allowing users to fully configure their own well-being environments.

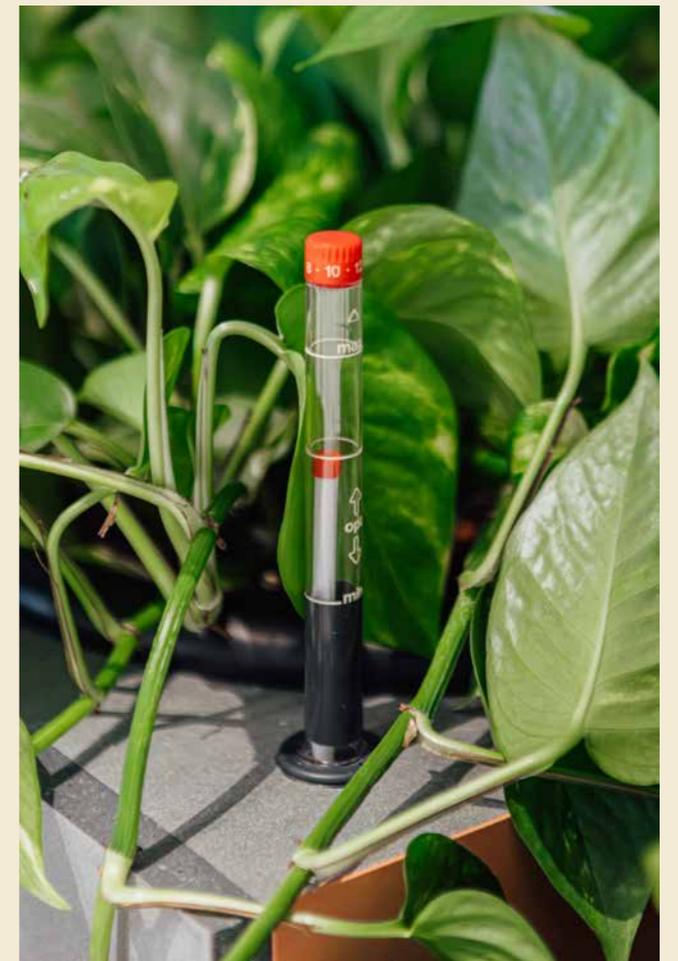

BIOPHILIA

We facilitate the integration of nature into spaces designed for well-being, turning them into healthy environments. Through our biophilic furniture systems, we propose a natural connection between plants and people.

PRACTICALITY

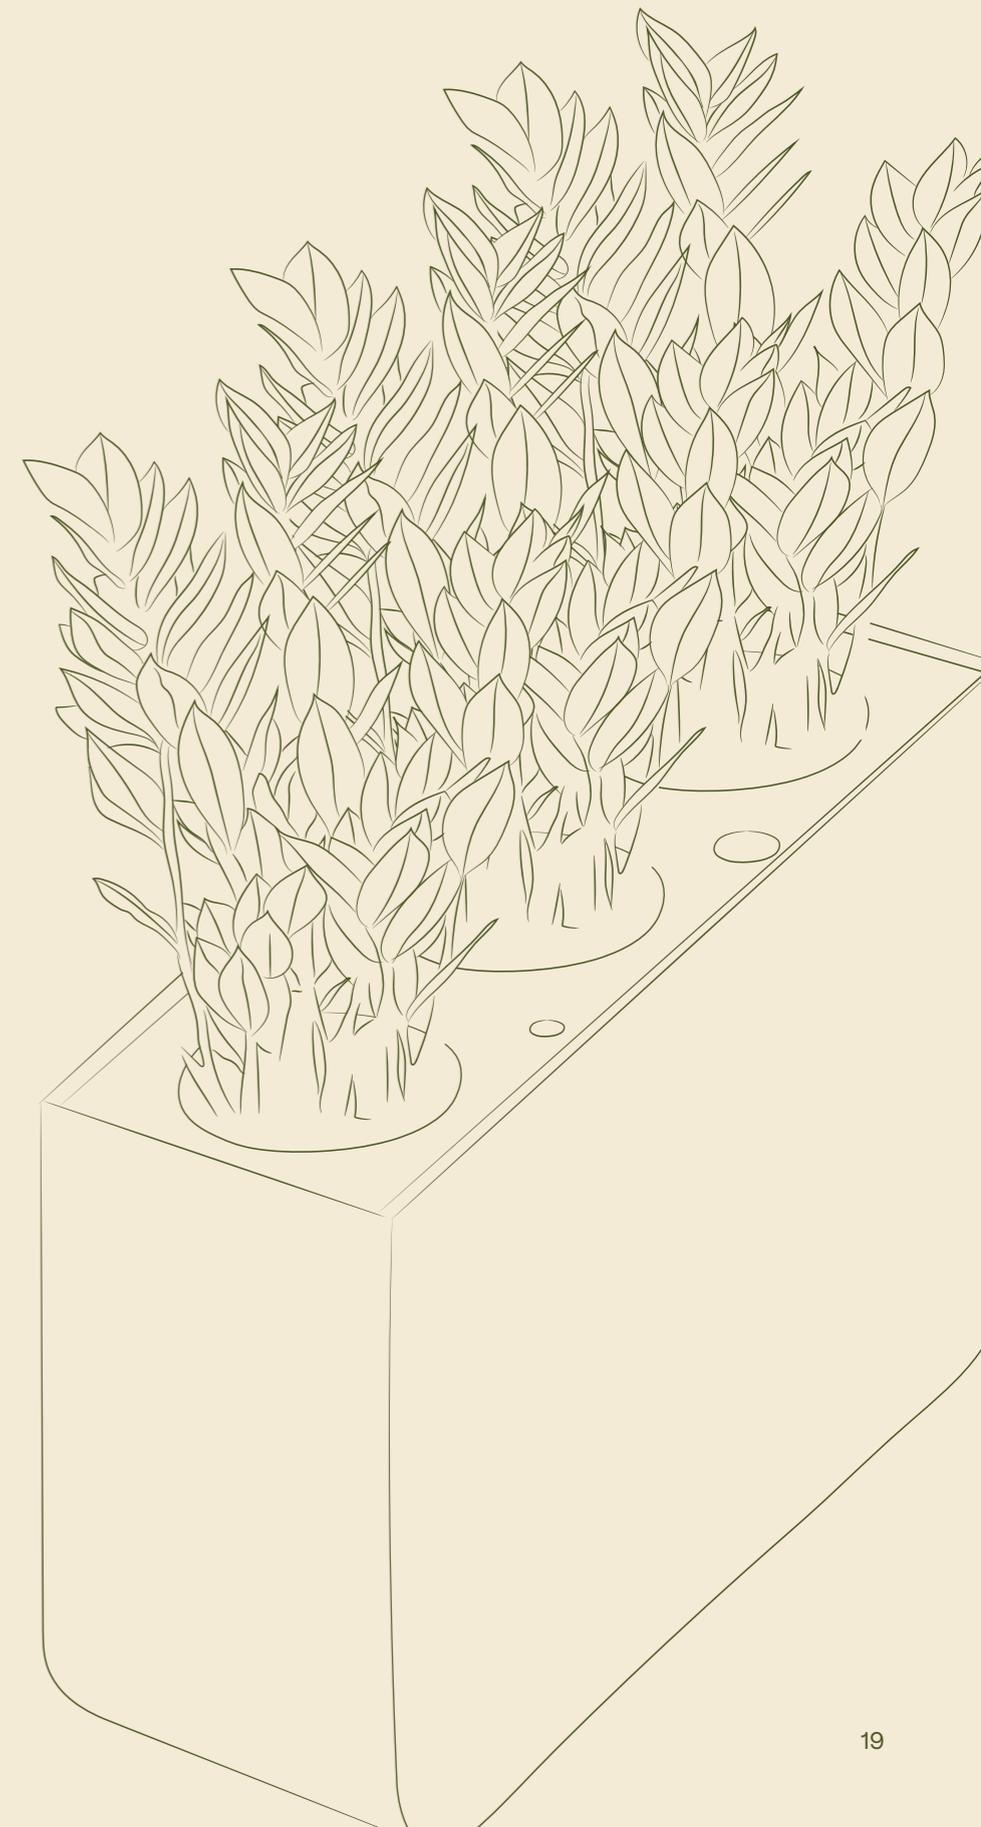

Our biophilic systems integrate self-watering technology to care for, accompany, and protect plant growth and the well-being of the people who live alongside them. Filling the self-watering tank four times a year, and watering the surface once a month is enough for a proper plant care.

MOTUS means movement, but also change, evolution, adaptability. Developed in collaboration with the OiKo Design Office, MOTUS combines recycled panels, interchangeable metal structures, and customizable finishings with a minimal ecological footprint. Each component is designed to be combined and evolve with every interior design project.

DESIGNED BY OIKO DESIGN OFFICE

HOSPITALITY

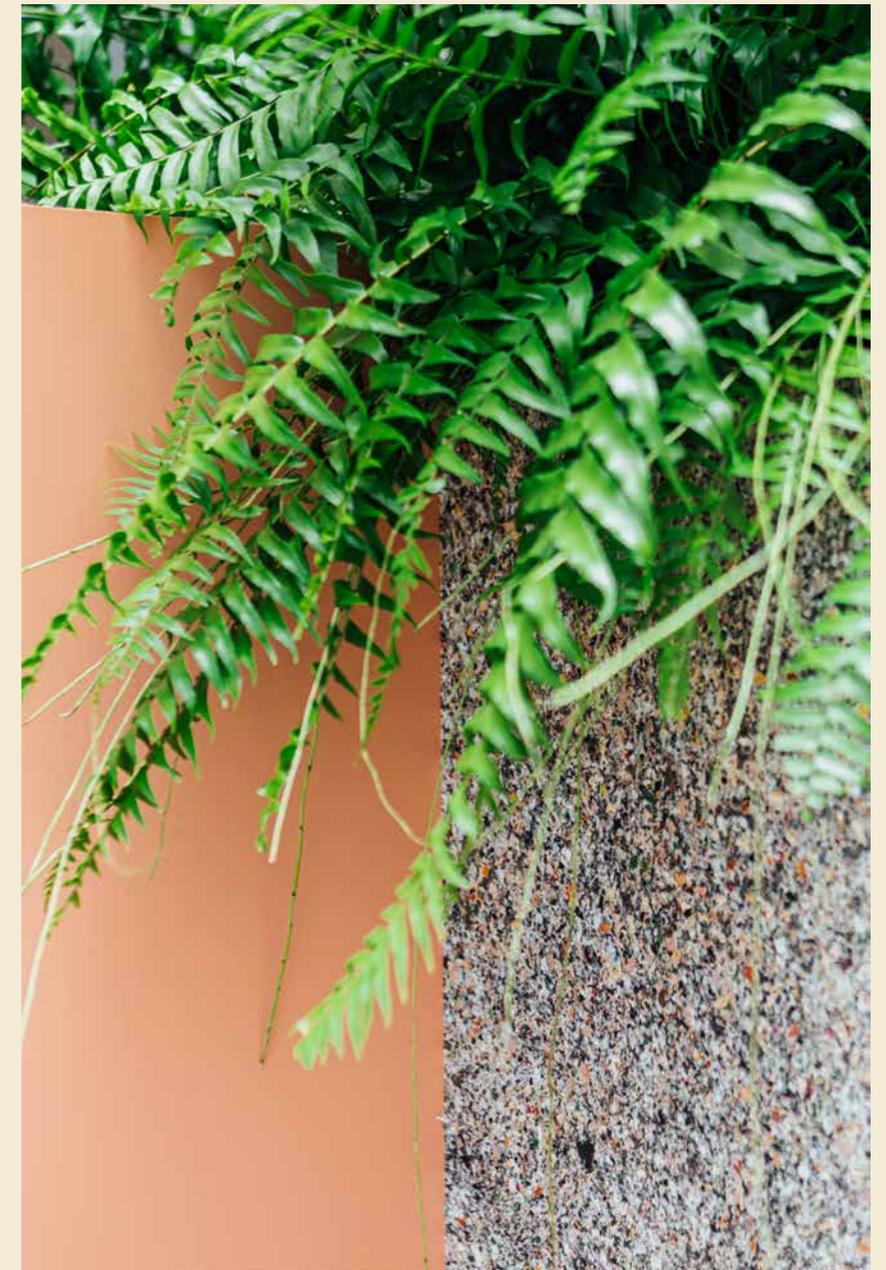

// Social spaces: Flexible separation. Modularity, identity, and shared comfort.

With PAF 100% recycled panels by PlasticPeople, we make circular economy principles visible in new interior architectures.

—

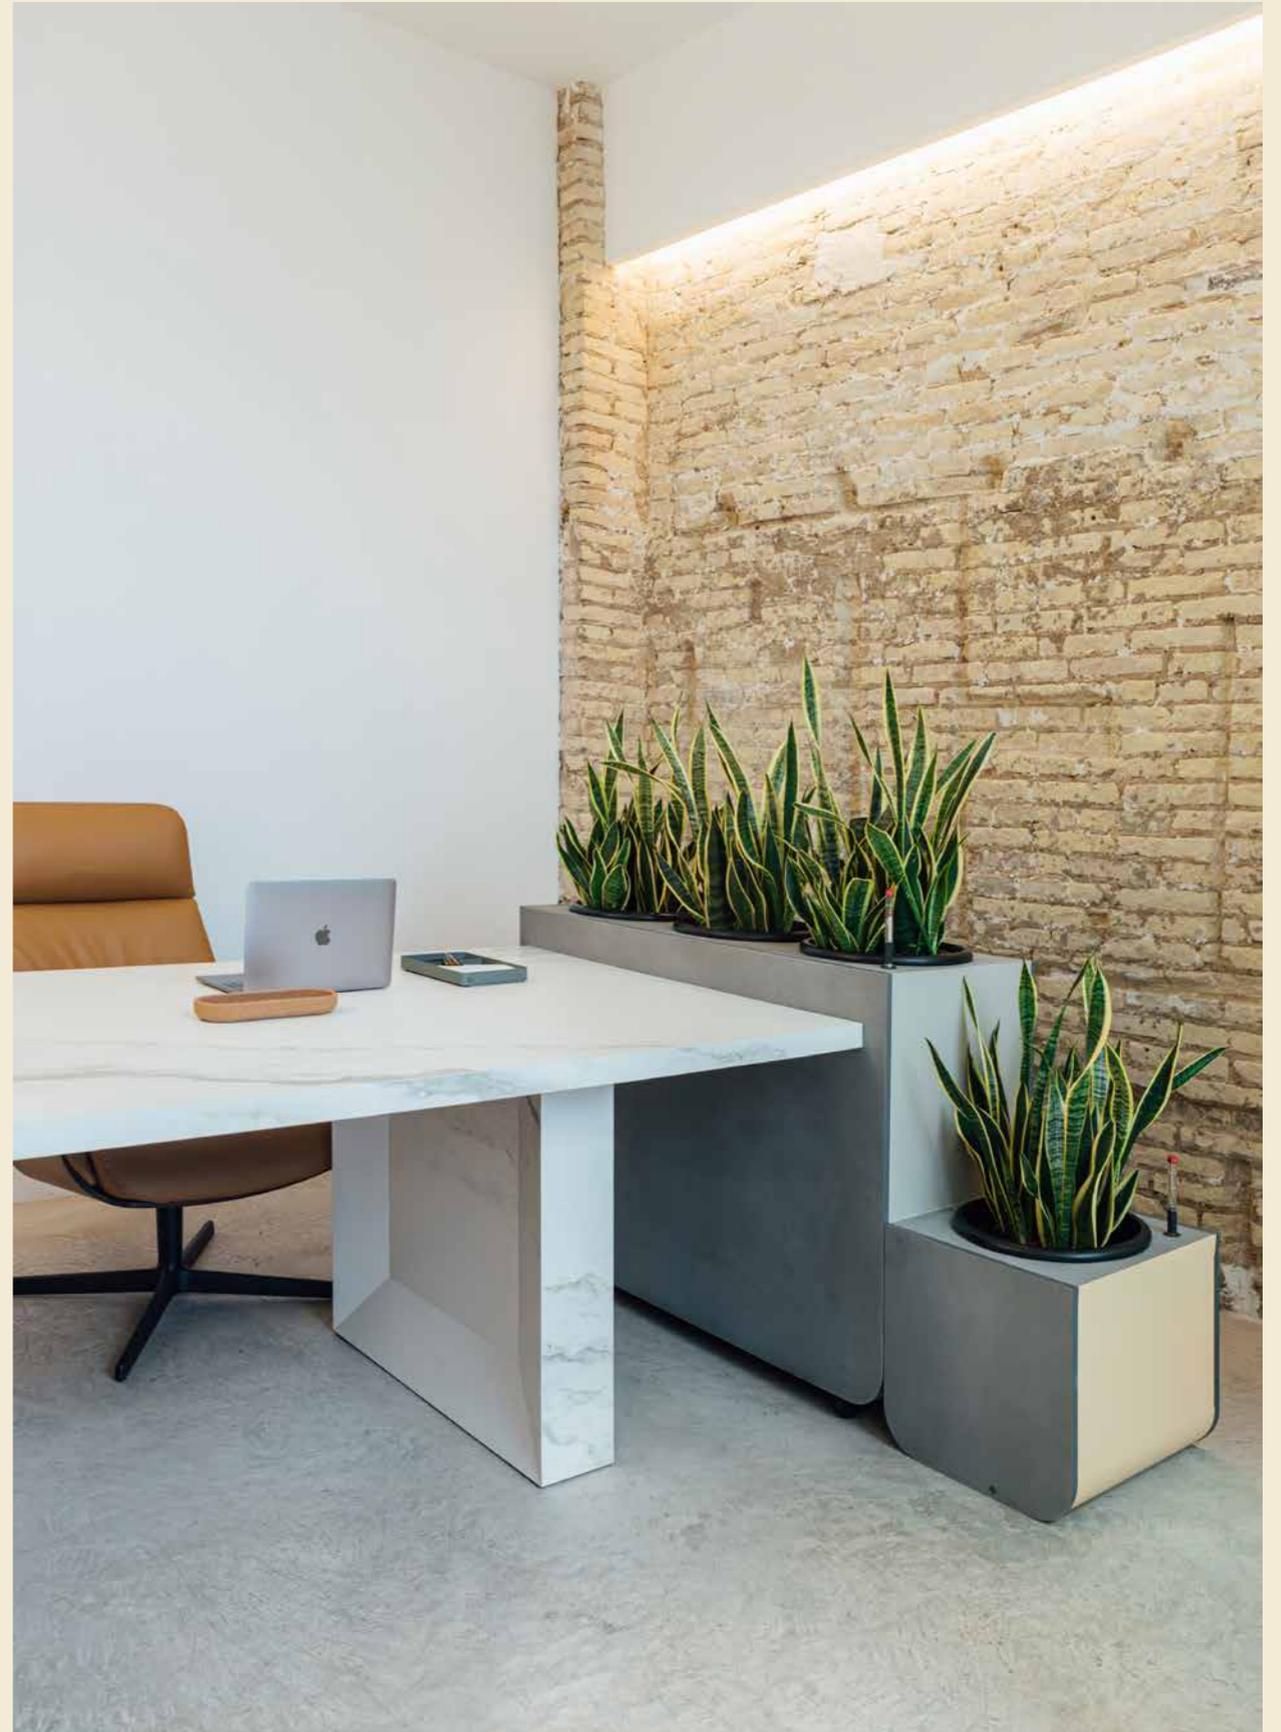

A multicolored surface with shiny spots and visible labels showing its origin. This material comes from product labels, plastic bags, and single-use food packaging, among others. These materials are recovered before being sent to dumping sites or incineration.

WORKPLACE

// Well-being offices: Improvement of job satisfaction. Calm, concentration, connection.

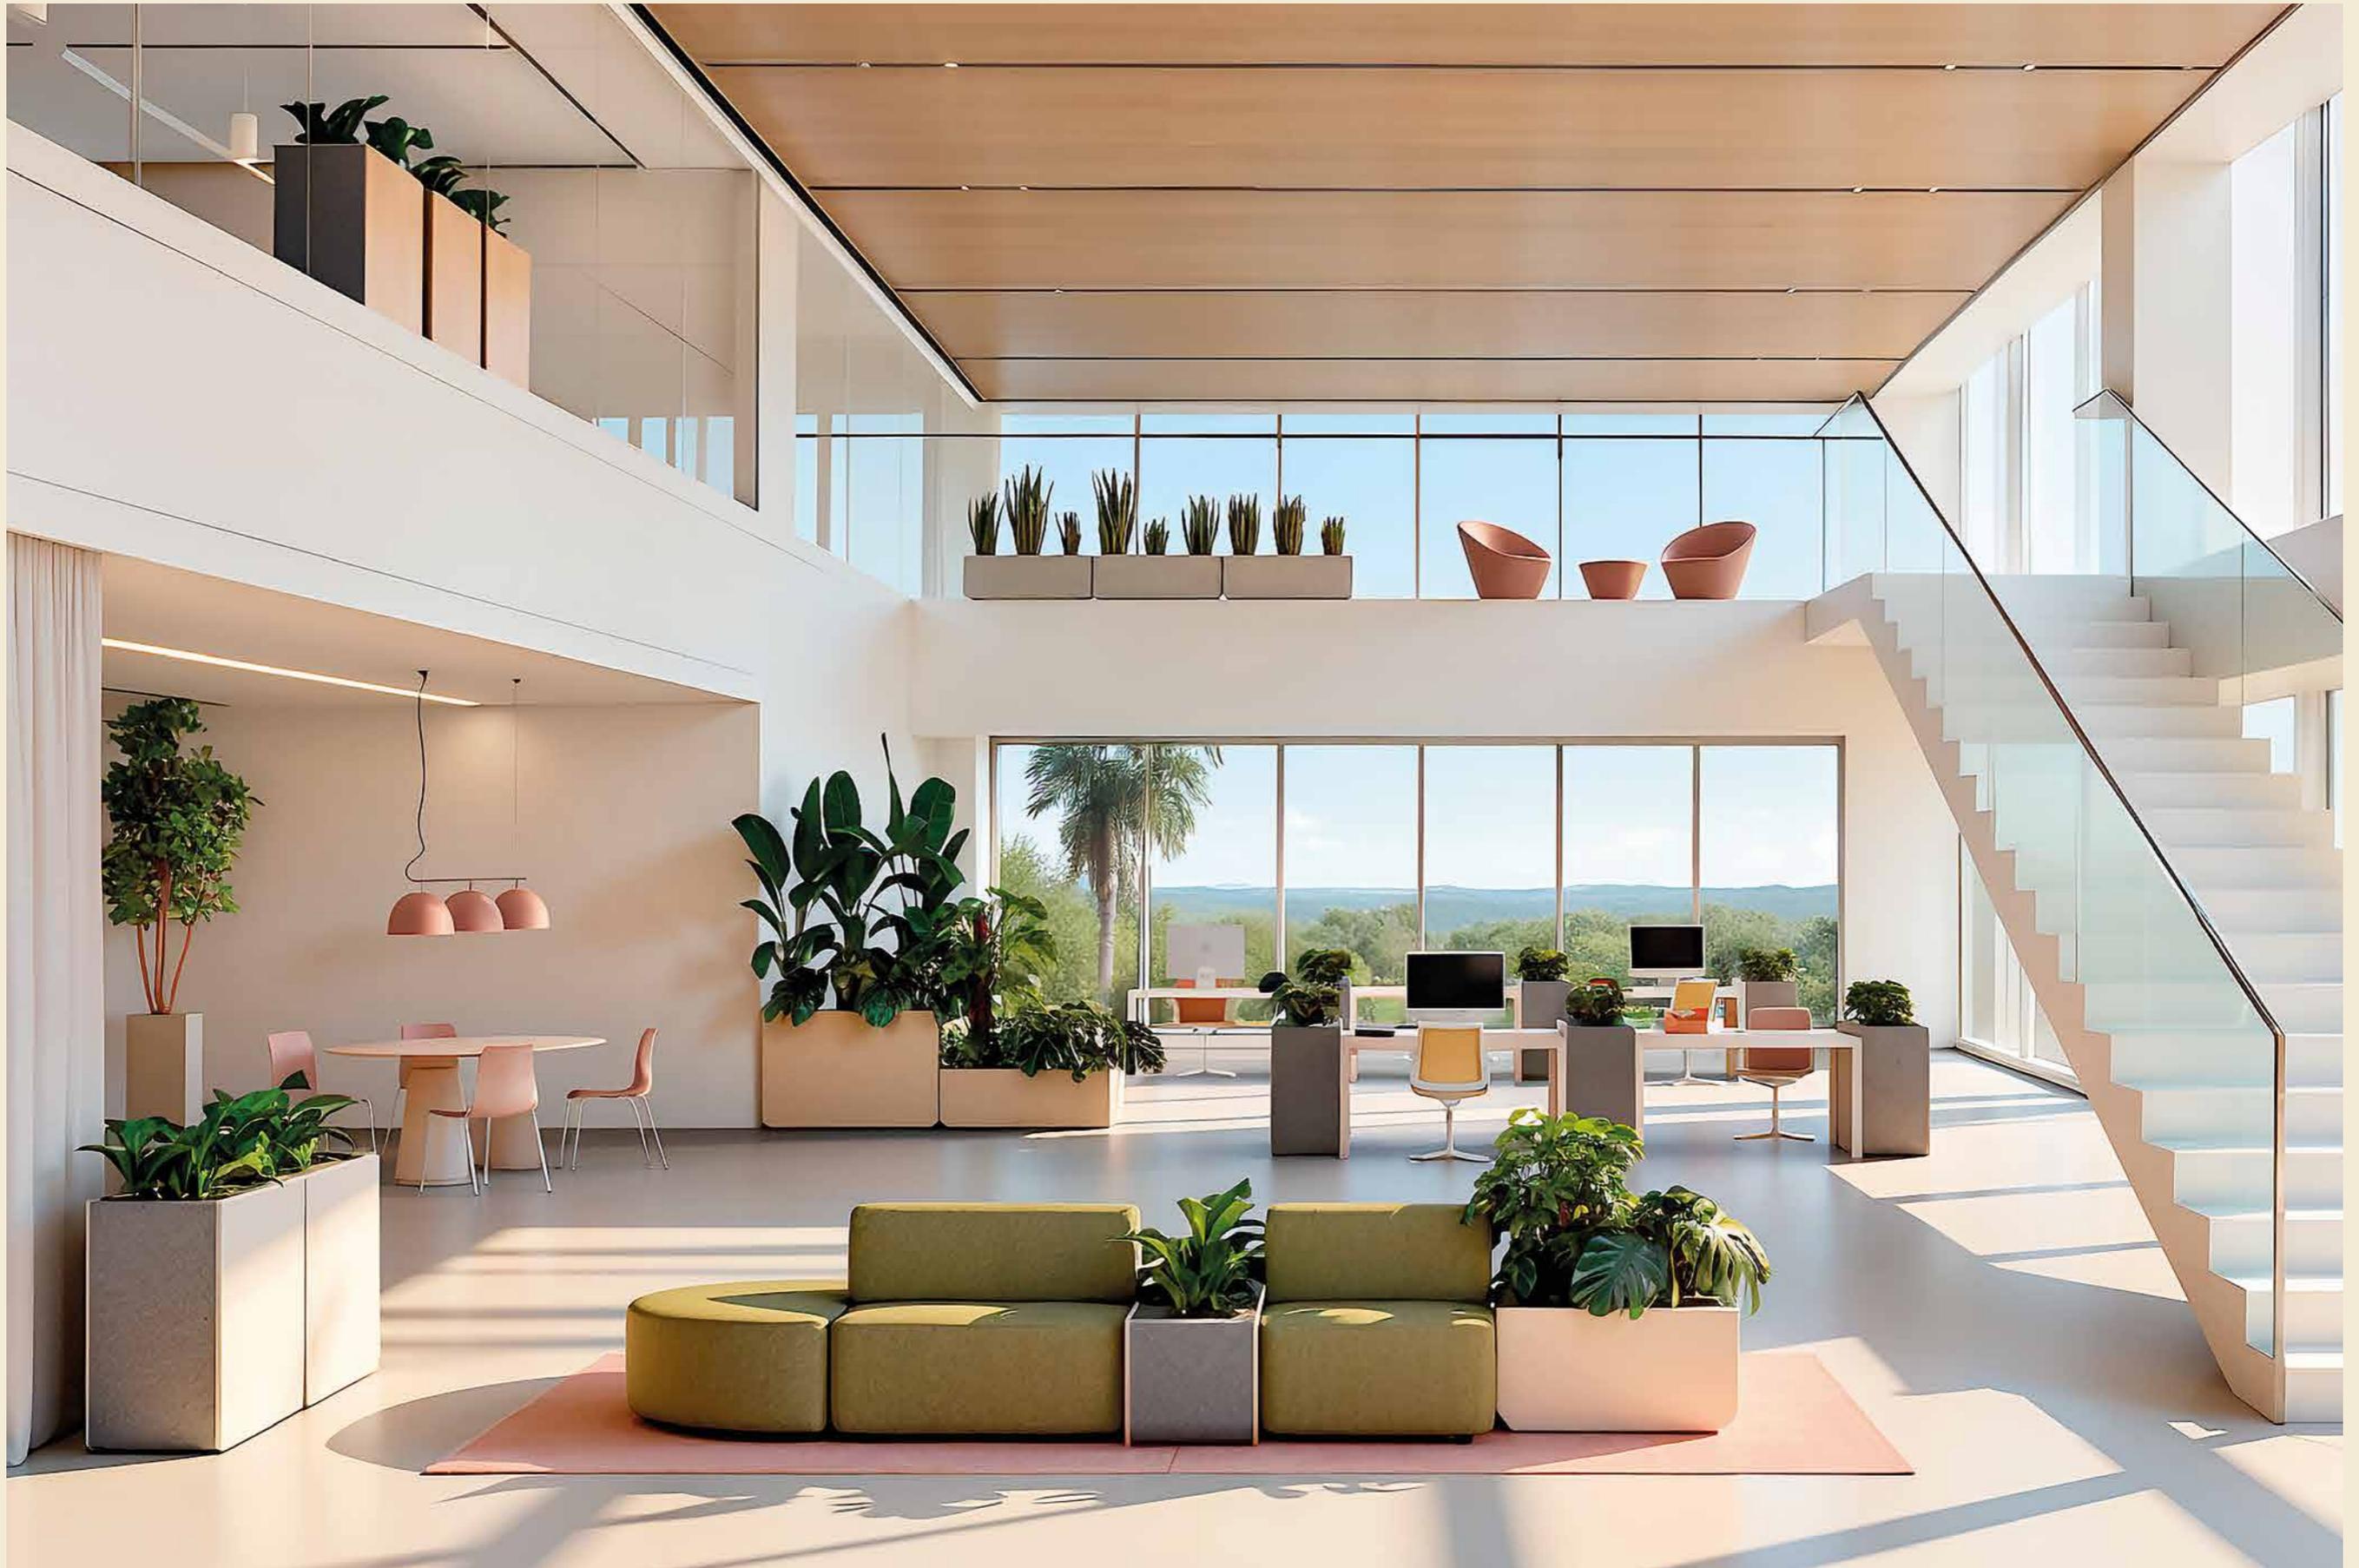

SPA 100% recycled panels by PlasticPeople allow smooth finishings in various tones. Combined with an interchangeable metal structure, they offer great flexibility in size and finishing.

—

A soft surface available in several matt tones. This material comes from post-consumption recycling of plastic fraction and aluminum of Tetra Pak® packaging. Thanks to the collaboration with PlasticPeople and local waste management agencies, we achieve homogeneous and reproducible panels.

SENIOR LIVING

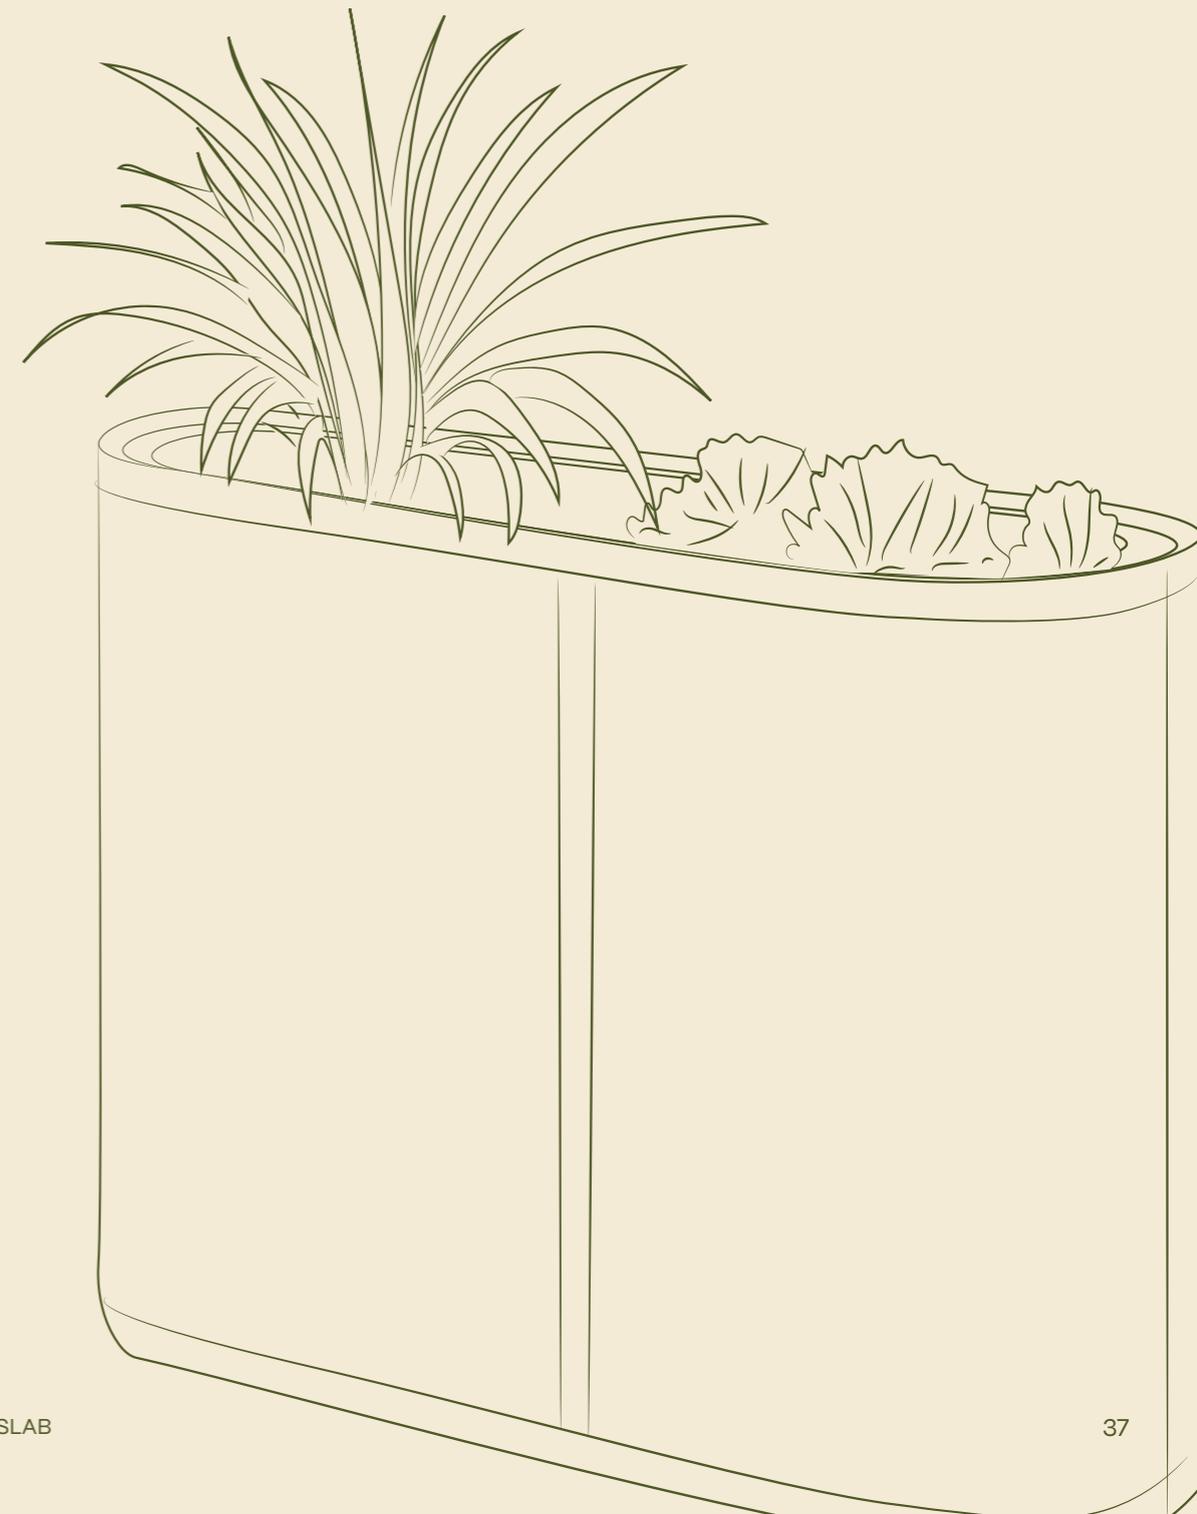

// Spaces where well-being and contact with nature enable care and interaction among people.

CHRYSTALLIS is a tangible metamorphosis. A system designed by the Lucid_ design studio that grows, changes, and welcomes. From planters to benches. From seats to tables. From plant support to meeting point. Its essence lies not only in design, but in its ability to change function without losing identity. CHRYSTALLIS is life in transition. It is adaptability with coherence. A single structure that breathes in multiple forms.
